

A butterfly is an insect.

Before it becomes a butterfly, the insect goes through changes.

First an egg is fixed to a leaf. The egg grows

for about two weeks. A caterpillar hatches from the

egg.

Before it becomes a butterfly, the insect goes through changes.

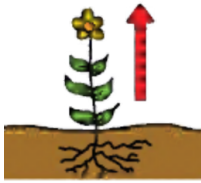

Caterpillars are like fuzzy worms. Caterpillars are also

called

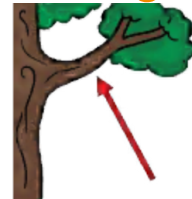

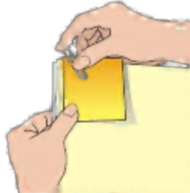

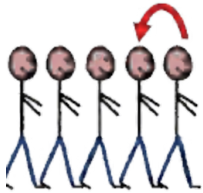

larvae. The caterpillar will eat many leaves and it

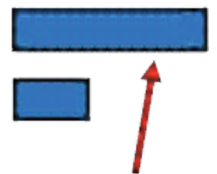

will grow.

Before it becomes a butterfly, the insect goes through changes.

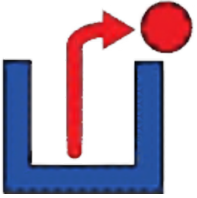

Next, the caterpillar attaches itself to a branch or

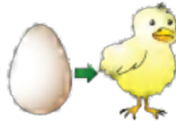

leaf and spins a cocoon. A cocoon looks like a long,

the cocoon for a few weeks, an adult butterfly comes

out of the cocoon.

Butterflies are beautiful. To become a beautiful butterfly, the

insect egg must go through many changes.
